Keywords

Distributed

- Parts of speech : *adj - v*

Idempotency

- Parts of speech : ***n***

Precondition

- Parts of speech : *n*

Latency

- Parts of speech : *n*

Throughput

- Parts of speech : *n*

Exacerbated

- Parts of speech : ***adj - v***

Asynchronous

- Parts of speech : *adj*

Event-Driven

- Parts of speech : *adj*

Resilient

- Parts of speech : *adj*

Cascading

- Parts of speech : *adj*

Reading

Reading: In the domain

In the domain of “**distributed** systems, ensuring **idempotency** in API calls is a **precondition** for maintaining consistency during intermittent network failures. Developers often face the dilemma of optimizing for **latency** versus **throughput**, a trade-off that is **exacerbated** in highly concurrent environments. Implementing **asynchronous** processing and **event-driven** architectures can significantly mitigate these bottlenecks. Furthermore, establishing a **resilient** microservices framework requires meticulous management of state to avoid **cascading** failures, a challenge that demands rigorous testing and observability patterns.”

vocab	meaning	Parts of speech
Distributed	سیستم‌های توزیع‌شده	adj - v
Idempotency	تکرارپذیری	n
Precondition	پیش‌شرط	n
Latency	تأخیر	n
Throughput	توان عملیاتی	n
Exacerbated	تشدید	adj - v
Asynchronous	پردازش ناهمگام	adj
Event-driven	معماری رویدادمحور	adj
Resilient	تاب‌آور	adj
Cascading	آبشاری	adj

Collocation

In the domain of “**distributed systems**”, ensuring idempotency in **API calls** is a precondition for maintaining consistency during intermittent network failures. Developers often face the dilemma of optimizing for latency versus throughput, a trade-off that is exacerbated in highly concurrent environments. Implementing asynchronous processing and **event-driven architectures** can significantly mitigate these bottlenecks. Furthermore, establishing a resilient microservices framework requires meticulous management of state to avoid **cascading failures**, a challenge that demands **rigorous testing** and observability patterns.”

Section

Work in class

A) Vocabulary Meaning

1) Exacerbated

a) Improved

b) Ignored

c) Made worse

d) Removed

A) Vocabulary Meaning

2) Cascading

a) Independent

b) Random

c) Hidden

d) Spreading from
one to another

A) Vocabulary Meaning

3) Resilient

**a) Flexible and able
to recover**

b) Weak

c) slow

**d) Spread across
multiple systems**

B) Fill in the blank with the correct form of the word.

4) Network failures can exacerbate (exacerbate) performance issues.

5) A resilient (resilience) system can recover quickly.

6) Developers must carefully manage distributed (distribute) systems.

7) The system processes requests asynchronously (asynchronous).

C) Identify true and false.

8) The text suggests that asynchronous processing and event-driven architectures are primary causes of bottlenecks in distributed systems.

a) True

b) False

C) Identify true and false.

10) According to the text, idempotency is recommended to ensure consistency when network failures are temporary.

a) True

b) False

C) Identify true and false.

9) The text implies that managing state meticulously is not crucial for building a resilient microservices framework that prevents cascading failures.

a) True

b) False

4
Section
Homework

A) Match words to form a proper sentence.

a) Latency

b) Throughput

c) Resilient

d) Cascading

1) Capacity

2) Chain reaction

3) Delay

4) Robust

B) Sentence Writing

5) Idempotency :

6) Observability :

7) Asynchronous :

C) Write the requested parts of speech.

8) Precondition

adjective ? - - - - -

9) Resilient

noun ? - - - - -

10) Latency

verb ? - - - - -

11) Precondition

adjective? - - - - -

A decorative graphic in the top right corner consisting of various letters (G, B, M, H, S, A, I, M, R, F) arranged in a curved, overlapping pattern.

Thanks!
